

## Response to EWG Information

We at Mount Laurel MUA are proud of our water quality record and always have our most current water quality report available for viewing on our website. The water we supply comes from a mixture of sources: our own treatment plant, NJ American Water and Willingboro MUA. The water from all of these sources meet or surpass all US Environmental Protection Agency (USEPA) and New Jersey Department of Environmental Protection (NJDEP) standards for safe drinking water which are intended to protect public health. We continually test the water we supply to ensure compliance.

The compounds listed by EWG were reported by Mount Laurel MUA to NJDEP. Most are disinfectant by products, which result from the disinfection process, and we meet all regulatory standards for these. The remaining compounds are in the source water at levels far below recognized drinking water standards. While we do not specifically treat for these unregulated compounds, their presence is affected by the overall treatment process.
